SUMMARY

Senior software engineer with 9+ years of experience building cross-platform mobile apps in Flutter and backend systems in Python and C#. Full-stack engineer on DeltaFx's 118K-LOC Flutter brokerage app and its Django backend, with a track record of clean, testable architecture, code-generation pipelines and enforced engineering standards. Author of more than 20 open-source packages on pub.dev and PyPI. Experienced in in-house and remote teams across Iran, the UAE, Germany and Turkey, and driven by continuous learning and measurable results.

EXPERIENCE

Senior Full-Stack Developer (Flutter & Django), *DeltaFx Broker*
Apr 2026 – Present
Mashhad, Iran

- Built a 118K-LOC Flutter broker app on Clean Architecture, BLoC and get_it DI (11 modules, 151 use cases, 63 BLoCs), with a typed Result error boundary in place of exceptions.
- Shipped deposits, withdrawals and transfers with address whitelisting, demo and live trading accounts, IB/affiliate dashboards, social-trading follow flows and AI-assisted chart analysis.
- Built Discovery, the app's social-feed backend, on Django Ninja (async), PostgreSQL and Redis: 10 apps and 90 endpoints covering feed ranking, moderation, paid promotions, search and insights.
- Integrated the backend with the broker CRM (OAuth/JWKS auth, role permissions, wallet payments with refunds) and exported its OpenAPI contract into the app's Dio + Retrofit code generation.
- Implemented full localization (1,715 keys) and a design system that generates typed Dart theme code from Figma tokens.
- Set up GitHub Actions CI/CD and Docker across dev, sandbox and production, with 132 Flutter test suites, 488 backend tests, zero-warning analysis and automatic APK/iOS builds per branch.

Tech: Flutter, BLoC, Django Ninja, PostgreSQL, Redis, Docker, GitHub Actions

Senior Flutter Developer (remote), *BTCB (Amatis Dadeh Exchange)*
Aug 2025 – Mar 2026
Dubai, UAE

Multi-platform cryptocurrency trading app delivering real-time market data and secure financial operations. Live on Google Play.

- Built real-time market data, advanced charting and trading interfaces for Futures, Spot and OTC markets.
- Implemented the full authentication surface: registration, login, Apple and Google Sign-In, JWT, 2FA, DPoP-bound tokens and passkeys.
- Structured the app on Clean Architecture with BLoC, and designed a dark/light multi-theme UI with motion design and 9-language localization.

Tech: Flutter, WebSocket, BLoC, Passkeys, DPoP, 2FA

Senior Backend Developer (remote), *Alpha Niro*
Nov 2024 – Aug 2025
Berlin, Germany

- Built a complete REST API secured with a two-way encrypted token system, along with an administration panel for system management.
- Re-engineered background data-processing pipelines, cutting heavy analytics jobs from 7 days to 2 hours.
- Developed MQL scripts bridging trading platforms and the backend to extract market data and trigger server-side actions.

- Automated data processing, test workflows and documentation generation, eliminating manual errors and standardizing output across test environments.

Tech: Python, REST APIs, MQL, Automation, DevOps

Software Developer, Mobile & Backend, *Freelance* Jul 2023 – Nov 2024

Traia — Copy-Trading & AI Trading Assistant Mashhad, Iran

- Built a copy-trading platform with gamification features to drive user engagement.
- Developed an AI trading assistant that analyzes users' trade history across 1,500+ factors with neural-network models to deliver personalized insights and recommendations.
- Implemented secure data pipelines and behavioral analytics to improve prediction accuracy and performance tracking.

Vu1 — Event-Oriented Social Platform

- Developed a multi-purpose event networking app for weddings, birthdays and parties.
- Built the app with a Flutter front end and a Python back end, supporting event creation, sharing and real-time interactions.
- Designed user flows optimized for social engagement and effortless event management.

Tech: Flutter, Python, Neural Networks, Analytics, Real-time

Application and Backend Developer (remote), *Bull-x-Bear Holding* Mar 2020 – Jul 2023

Accounting Software Suite Istanbul, Turkey

- Built a full accounting suite in Python and C#.
- Developed admin and management panels for financial operations, access control and reporting.
- Implemented general ledger, accounts payable/receivable and financial statement modules.

Investor Portfolio App

- Built a cross-platform Flutter app for investors to track and manage their portfolios.
- Integrated real-time market data and secure APIs for investment tracking and transactions.
- Designed portfolio dashboards and data visualizations.

Employee Performance Automation System

- Built an automated system that calculates employee performance metrics and productivity insights.
- Developed KPI-tracking algorithms that support data-driven management decisions.
- Streamlined activity tracking and reporting for employees and management.

Tech: Python, C# / .NET, Flutter, Accounting Systems

Backend Developer, *Katana Co.* Sep 2018 – Mar 2020

Automated Trading Robots & Financial Optimization Mashhad, Iran

- Developed proprietary trading robots in MQL and Python that execute trades automatically on predefined strategies.
- Deployed the robots to production, increasing company trading profit by up to 15%.
- Ran extensive backtesting and parameter optimization to maximize performance and minimize risk.

Accounting Application for Trading Robots

- Built a dedicated accounting application to manage the trading robots' financial activity.
- Automated real-time data collection from trading platforms for accurate tracking of every transaction.
- Developed profit/loss, capital management and performance reporting modules for clear financial oversight.

Tech: MQL 4/5, Python, Backtesting, Risk Management

EDUCATION

Khavaran Institute of Higher Education, 2014 – 2019
B.Sc. in Biomedical Engineering — Bioelectric Mashhad, Iran
GPA: 17.6 / 20
B.Sc. Thesis: Early Diagnosis of Alzheimer's Disease Using Neural Networks and a Genetic Algorithm (08/2019)

SKILLS

Mobile
Flutter, Dart, BLoC, get_it, Retrofit, dart_mappable, Melos

Backend
Python, Django, Django Ninja, FastAPI, C# / .NET, REST APIs, OAuth 2.0 & DPoP

Data
PostgreSQL, Redis Streams, TimescaleDB, WebSocket, Data Pipelines

Infrastructure
Git, Docker, GitHub Actions, CI/CD, Multi-environment Builds, DevOps

Trading
MQL 4/5, Backtesting, Market Data, Copy Trading

Principles
SOLID, OOP, DRY, KISS, YAGNI, Dependency Injection, Clean Code, Design Patterns

PAPERS

Early Diagnosis of Alzheimer's Disease Using a Combination of Images Processing and Brain Signals, Dec 2018
International Journal of Biomedical and Biological Engineering
https://doi.org/10.5281/zenodo.1316574

Epilepsy Diseases Detection using Cross-Correlation with Support Vector Machine for Brain Signal Classification, Mar 2017
13th Symposium of Advances in Science and Technology
https://civilica.com/doc/572097/

Speech Accuracy Detection Using Psychophysiological Signals Based on Nonlinear Methods, Oct 2016
National Conference on Electrical, Electronic, Biomedical Engineering, and Sustainable Land
https://civilica.com/doc/572095

Identification of Parkinson's Disease Stages through Brain Signal Analysis and Processing, Mar 2016
12th Symposium of Advances in Science and Technology
https://civilica.com/doc/572118/

Research and Analysis on Android-Based Applications in the Health Sector, Dec 2015
National Conference on Sustainable Land, Novel Research in Electrical and Biomedical Engineering
https://civilica.com/doc/726301/

AWARDS

Third Place in the 6th CanSat Small Satellite Building Competition 2019

Head of the Robotics and Biomedical Engineering Laboratory 2018

Top Student in Biomedical Engineering at the University (2 Years) 2017

Secretary of the Scientific Association (2 Years) 2016

Most Active Student Award 2016
